

Welcome To The XInt Tint Experience

Leading The Way

In Energy, Design, and Safety Solutions For Your Windows

Since 1988

The XInt Tint Experience

Completely free computerized proposals. Get a complete proposal with no guessing or excess charges.

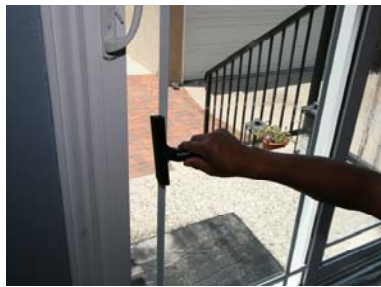

The XInt Tint Experience starts from the beginning. Our professional staff will guide you through a seamless process of choosing the right film for your needs, explain the benefits, and show you all of the options to achieve your goal.

We care about your property. Floor coverings and shoe covers are used to ensure nothing is tracked on your floors.

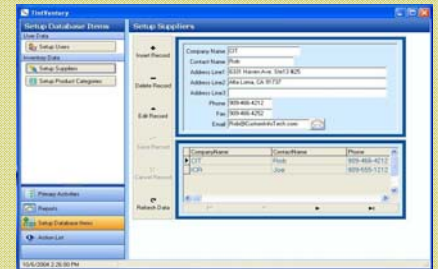

Every window is cleaned thoroughly to remove any contaminants that stick to glass. We use only highest grade stainless steel blades in our process.

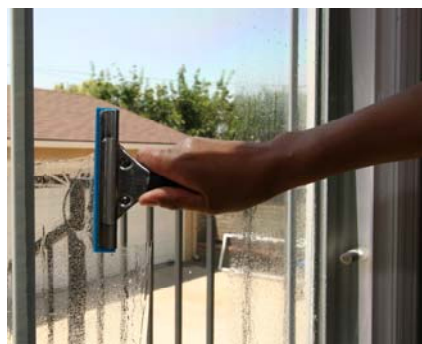

Each office has obtained the necessary licenses to perform work in your state. We pride ourselves in having obtained the highest coverage of insurance to protect you. Rest assured that every employee is completely covered by our workman's compensation policy which protects you in any event.

We only use the finest equipment during your install. Using a Film Handler minimizes waste and keeps your film clean and dust free up until installation.

All installers are factory trained to ensure the highest quality of installation possible. We also employ our own installation staff, no sub contractors ever...

XInt Tint uses its own proprietary software to calculate your proposal and track its inventory. By using these tools we minimize waste and save you money.

All our license info and certificates are always viewable online under the "Why XInt Tint" area of our website, or simply ask any associate for a copy.

"Done Right The First Time"

What does XInt Tint do for your company and clients?

- Onsite Management (Dedicated Project Manager)
- Extensively Trained Crews
- Installation of Safety Films Up To 21 Mil
- Attachment System Installation (Metal or Wet Glaze)
- Precise Film and Attachment Use Management
- Daily Reports
- Precise Scheduling Models
- Handle Sign Off and Final Documents
- Site Surveys Available
- Free Proposals on Non Travel Projects.
- Non Disclosure of Project Specifics
- All Installers Covered By XInt Tint's Workman's Comp Insurance

Professionally Cut Films To Reduce Waste

Professionally Installed And Backed

Difficult Job Specialists

Oct 5, 2001
Capital Hill Window Film Project
XInt Tint lead the 50 man crew over 8 weeks to install 265,000 sq ft of blast mitigation film to nine high priority buildings.

WAMATA Building
Washington, DC
Over 45,000 sq ft 7-mil clear with mechanical attachment system.

Mike Schuch and Jeff Green on top of the US Capitol Building overlooking the National Mall.

Commercial Window Films

Installing window film to your commercial property offers numerous benefits including:

- 99.9% UV A & B Protection To Occupants and Building Assets
- Up To 81% Total Solar Energy Rejection
- Up To 98% Infrared Heat Rejection
- Outstanding Glare Reduction
- Energy Savings In Summer and Winter
- Ceramic and Conventional Films Available
- Available In Safety/Security Versions
- Great Return On Investment (ROI)
- Qualifies For LEED Credits
- May Qualify For Local Energy Rebates

Going Green By Saving Energy And Reducing Your Carbon Footprint

DHS (SC Herman) Washington, DC
Completed in 2008, XInt Tint installed 26,000 sq ft of tinted blast mitigation film.

"XInt Tint is the best contractor we have ever dealt with. Their professionalism and attention to details is superb. I will always recommend XInt Tint on all my projects."

Joe M. SC Herman & Assoc.

The AT&T Building Los Angeles, CA
Completed in 2007, XInt Tint removed and replaced all 29 floors to high energy efficient window film that gave the building a uniform look and equalized comfort. Completed in 6 weeks. Over 92,000 sq ft installed.

Reduce Energy Use And Costs AT&T Bldg Projection

Projected reduction in energy use (kwh) 437,035

Average cost per kwh \$.125

Projected reduction in annual energy spending \$54,629

Information is based on an estimate generated by Demand Analyzer, which utilizes the US Department of Energy's DOE-2 energy analysis software. Calculations shown are shown as an example.

Residential Window Films

Installing window film to your home offers numerous benefits including:

- 99.9% UV A & B Protection
- Up To 81% Total Solar Energy Rejection
- Up To 98% Infrared Heat Rejection
- Outstanding Glare Reduction
- Daytime Privacy
- Energy Savings In Summer and Winter
- SPF Rating Of Greater Than 200
- Ceramic and Conventional Films Available
- Great Return On Investment (ROI)
- Qualifies For Federal Energy Tax Credits

Our products give you the sunscreen like protection for your home without sacrificing your view or look.

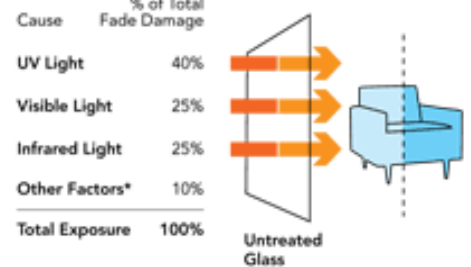

UV Damage

"Window film installed by XInt Tint not just saved our wood floors and furnishing but we also saved over 30% on our monthly cooling and heating costs. Thank you for all your efforts."

Mark H. Huntingtown, MD

What causes fading?

*"Other Factors" include humidity, air quality, temperature and material construction.

Energy Consumption Comparison

Average annual energy consumption to cool a home without window film **2655 kwh**

Average annual energy consumption with window film **1400 kwh**

Average annual reduction in energy consumption **1255 kwh**

Average annual reduction percentage **47%**

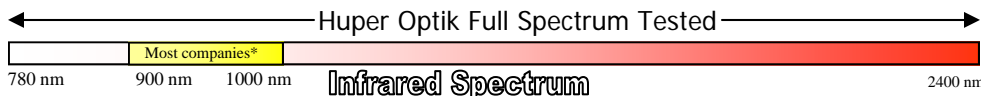

Data based on 2000—2500 sq ft home. Project results vary depending on climate, geography, home construction, thermostat setting, and type of window film installed.

Ceramic Window Films

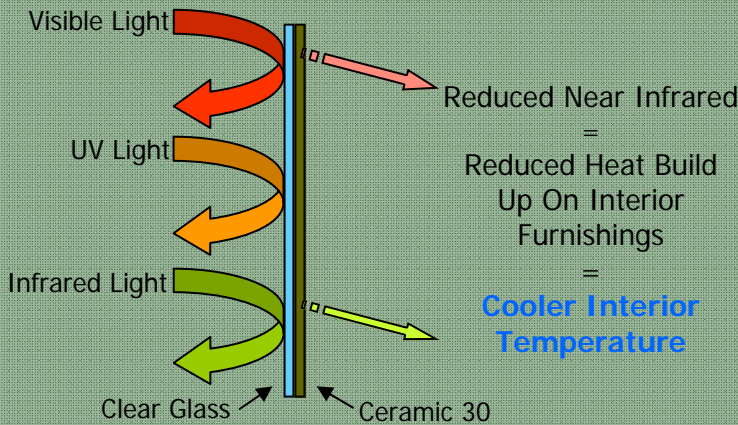

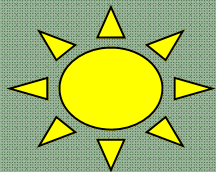

Why Choose Ceramic Technology

- Full Solar Spectrum Testing To 2400nm
- Excellent Heat Rejection
- German Engineered
- Ceramic Based
- Ultra Low Reflective Appearance vs. Conventional
- 99.99%+ UV Rejection
- SPF Rating 200+
- Polarized View Enhancing Effect
- 100% Dye-Free 100% Metal-Free
- Lifetime Residential Warranty
- 15 Year Commercial Warranty

Conventional Window Films

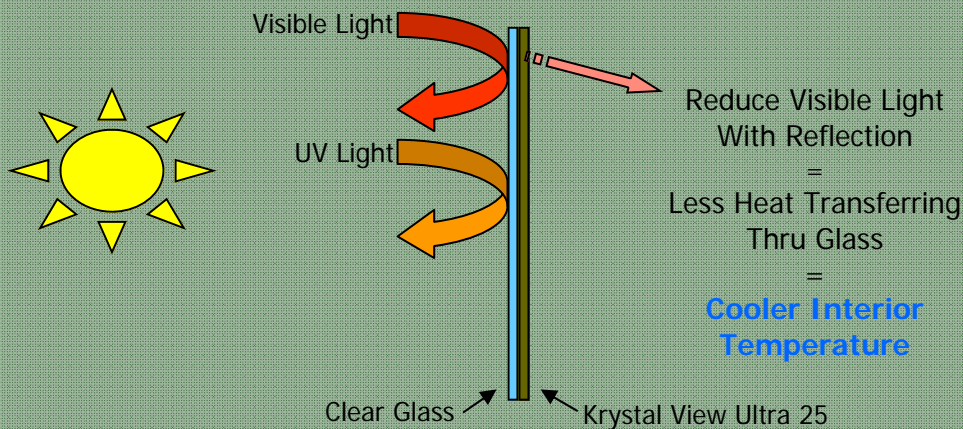

Benefits Of Conventional Technology

- Excellent Heat Rejection
- Several Colors Available
- Metal Base Dual Reflective
- Over 30 Years Of Manufacturing
- Reflective Appearance To Add Privacy
- 99% UV Rejection
- 100% Dye-Free
- Lifetime Residential Warranty
- 15 Year Commercial Warranty
- Lower Overall Cost

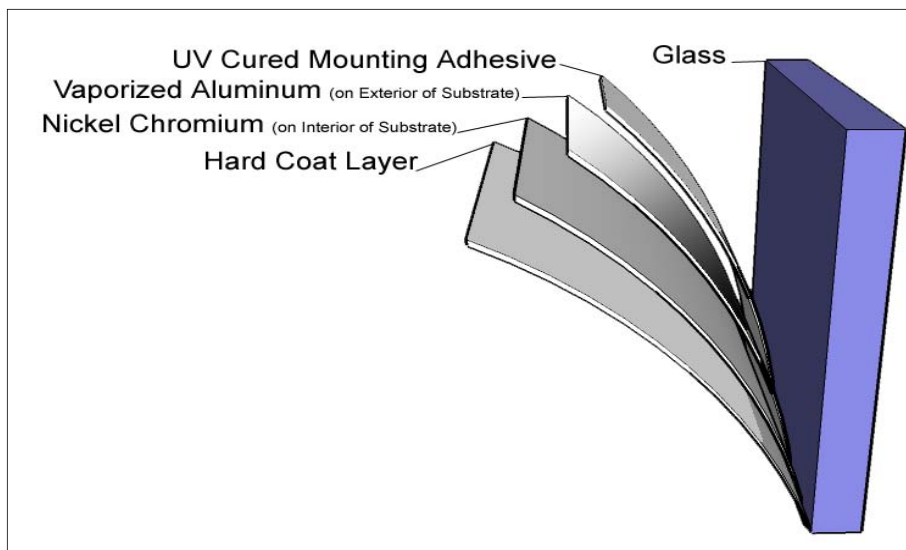

Radio Shack, N. Las Vegas
 XInt Tint provided us a viable option for our unique store. The film has worked far past our expectations.
 Thanks,
 Gary S. Store Manager

Peek Storefront Design (CA/AZ/TX)

Hundreds Of Film Choices Available

Cut Glass Atlantis

Dusted Crystal

Atlantis Mosaic

Cut Glass Mosaic

Carl's Jr. Stars
 Xlnt Tint has installed over 500 stores with custom frost stars to the entrances of their remodeled stores.

Corporate Conference Rooms
 Need to add that corporate feel to your office? Let Xlnt Tint help in the design and installation of a custom decorative film.

Custom Printed Films
 Do you have a logo or an idea for a eye popping graphic? Xlnt Tint can print any graphic mild to wild for that unique professional look.

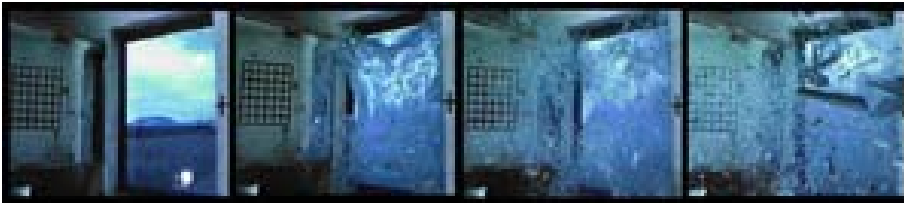

Safety and Security Films

What Does Safety and Security Film Offer

- Superior Invisible Protection 24 Hours A Day
- Protection From Flying Glass
- Holds Glass Together In Accidental Or Premeditated Breakage
- Withstands A 4 PSI Blast
- Available In Solar Versions To Offer Heat Control
- 99% UV Protection In Clear Or Tinted Versions
- Meets GSA Strict Blast Criteria
- Strong Factory Backed Warranty
- Available In 4-Mil To 21-Mil
- Meets Or Exceeds Impact Testing Requirements

"Protecting You One Window At A Time"

Blast Sequence

OPM Washington, DC
Removal and replacement of 70,000 sq ft tinted blast mitigation film and over 17 miles of mechanical attachment system to the entire building.

Boeing Seal Beach Complex:
Installation of blast mitigation film to the entire building complex. This was made up of over 10 buildings and over 40,000 sq ft of installation.

ARA/XInt Tint Blast Tests:
XInt Tint was proud to be involved in the large scale blast tests in New Mexico. XInt Tint installed all testing materials and witnessed the blast first hand.

Graffiti Protection Films

Tired Of The Cost Of Vandalism And Graffiti

- Great For Storefronts
- Protects Elevators/Escalators/Bathroom Mirrors
- 1/3 The Cost Of New Glass
- Acid Proof
- Tough Multi Layer Construction
- Invisible Sacrificial Coating That Is Undetectable
- Unlimited Uses And Applications
- Vast Knowledge And Experience
- Professional Installation

“Saves Money And Maintains A Great Look”

Las Vegas, NV
All Las Vegas strip bridges and elevators are coated with a anti graffiti film that XInt Tint maintains.

Baltimore, MD
Inner Harbor office building with graffiti film. Large expensive windows that are in a high traffic area. The least expensive alternative.

MTA Los Angeles, CA
XInt Tint holds the largest graffiti film maintenance contract in the world. We are proud to have been awarded this contract 3 separate times due to our vast knowledge of the system and our success in protecting the stations effectively.

Energy Savings And LEED Credits

Today's high energy consumption has created heavy peak demand loads effecting everyone's bottom line. Business and property owners are exploring options to reduce energy costs, but may be restricted by budget constraints, while utility providers continue to make a great effort to meet escalating demand loads for energy. Through technological advancements window film has quickly become the practical energy solution for a number of reasons.

PROPERTY OWNERS & MANAGERS

By rejecting up to 80% of the sun's infrared heat, the buildings temperature is truly under control by the heating and ventilation system. Film can save up to one ton of air conditioning for every 100 sq. ft. of glass exposed to the sun. You may be able to downsize your chiller, thereby reducing your energy consumption and overall energy costs.

GREEN ADVOCATES

Will benefit from an energy efficient, Energy Star rated product and will enjoy a lower carbon footprint as window film has 32 times less embodied energy than common dual pane insulated glass windows. Everyone can enjoy natural sunlight and not worry about harmful ultraviolet light rays damaging skin or other valuable assets.

CONSULTANTS

Window film completes any buildings' envelope, rejecting up to 80% of the sun's infrared heat. It stabilizes interior hot spots caused throughout the course of a day. During cold weather months, film is an insulator greatly reducing the loss of warm air through the windows. Your customers may qualify for government/utility incentives available for making an energy efficient upgrade.

UTILITY COMPANIES

If periods occur where demand for electricity is greater than your total capacity, window film helps lower demand during "peak demand" periods. Whether you experience a summer-peak", a "winter-peak" or both, window film compliments any demand side management program. Stabilize your company's Annual and Incremental Effects with window film.

LEED Certification

There are many opportunities to leverage window film when applying for LEED Certification. Window film is covered under LEED for new and existing building certification. While some categories seem to contradict each other, it is important to review the entire set of opportunities and apply for the areas that provide the greatest impact for your building. Xlnt Tint offers an array of window films with varying visible light and heat rejection properties that are certified by the National Fenestration Rating Council (NFRC); a non-federal, non-profit organization that sets the guidelines for fenestration products in the U.S.

All buildings, new and existing applying for LEED Certification must meet the EPA Energy Star® minimum energy performance rating of 69. Energy efficient window films can help companies achieve the initial rating. Once the energy baseline are met, then the film is eligible for LEED credits in six categories. The table below shows LEED points that can be earned for an existing building based on additional energy efficient improvements.

Energy Usage Baseline %	10	13	17	21	25	29	33	37	41	45	49
LEED Points Earned	Required	1	2	3	4	5	6	7	8	9	10

By applying window film, you can earn up to 4 credits in this category

Eligible Categories
For LEED Credit:

- | | |
|--|--|
| 1. ENERGY PERFORMANCE CREDIT | 4. DAY LIGHTING CREDIT |
| 2. LIGHT POLLUTION REDUCTION CREDIT | 5. THERMAL COMFORT CREDIT |
| 3. GLARE REDUCTION CREDIT | 6. INNOVATION AND DESIGN CREDIT |

The certification process requires that specific energy reduction goals are met. According to the guidelines of Energy Star® rating and the building provide electricity cost and usage before improvements are made. More details can be found in the USGBC LEED for existing buildings reference guide, version 3.0, available at www.usgbc.org
